FOR INTERVIEWERS · NOT PART OF DANA'S PACKAGE

Design Decision Log

Companion to Behind the Design: WN7 Recovery Strategy

A curated record of the choices underneath the five defining decisions: what I chose, why, what I considered or changed, and how it shaped the proposal. It isn't a build history. Each entry traces to the full working log kept during the project (item numbers at the right of each entry).

DESIGNER DECISION my call as the designer

PROPOSED · NEEDS APPROVAL depends on an organizational owner

REQUIRED BY CASE MATERIALS a constraint from policy or the case record

Raised by names who originated the idea or flag: me, GPT (design reviewer in a separate chat), Claude (builder and source checker), or a case source. **Decided by** is who made the final call and how: adopted, modified, kept or rejected. Agents suggested; I decided.

A Needs assessment and problem framing

A1 Separate the need from the requested solution

DESIGNER DECISION

Raised by: Me (position); GPT (framing) · **Decided by:** Me

DECISION	Treat Dana's video request as one possible solution and diagnose the performance problem first.
RATIONALE	Guides were asking for in-call help ("what I click and what I say"), several causes weren't about training, and completion wouldn't show whether calls changed. Dana also asked for "your best take on what Learning can put in supervisors' hands quickly."
ALTERNATIVE / TRADEOFF	Build the five-minute video as requested. I didn't rule it out as a supporting resource.
CONSEQUENCE	A needs assessment came before any format, and the video narrowed to an optional, conditional Orbit tool walkthrough.

Working log: D35

A2 Analyze the workbooks before setting priorities

DESIGNER DECISION

Raised by: Claude (flagged the gap); GPT (agreed) · **Decided by:** Me (approved)

DECISION	Run a data pass on the two Orbit workbooks before locking design targets.
RATIONALE	The workbooks were the biggest unexamined source. They showed that 70 of 159 eligible calls with a recorded serial check still ended in generic troubleshooting.
ALTERNATIVE / TRADEOFF	Design from the qualitative notes alone. GPT later corrected an over-reading: the 44% figure supports investigating the check-to-action gap; it doesn't mean 44% of Guides need a video.
CONSEQUENCE	The 70-of-159 figure anchors the Lead meeting (Case B) and the email, always framed as a recorded check, not proof of understanding.

Working log: D64, D72

A3 Fix design targets before choosing formats

DESIGNER DECISION

Raised by: Me; GPT (review rounds) · **Decided by:** Me (locked)

DECISION	Lock five design targets (end-to-end Guide performance, Lead calibration, in-call support, operational readiness, a small capacity-conscious pilot) before deciding any resource format.
RATIONALE	Picking formats first would have rebuilt the video request in other shapes. Each resource needed a defined job.
ALTERNATIVE / TRADEOFF	GPT's proposed organizer structure was parked rather than adopted, and the working rule became no format until its job is established.
CONSEQUENCE	Every later resource maps to one of the five targets.

Working log: D65, D67, D68

B Lead alignment and coaching

B4 Lead-anchored, but not a gate on Guides

DESIGNER DECISION

Raised by: Me; Claude (evidence); GPT (reframe) · **Decided by:** Me

DECISION	Anchor the design in Leads while Guide support develops in parallel.
RATIONALE	Guides can't carry out a process their Leads haven't been aligned on, and Leads can't give consistent feedback without knowing what to look for. The release had already relied on Leads without equipping them.
ALTERNATIVE / TRADEOFF	GPT's three-layer model (foundation, reinforcement, execution) was noted but not adopted. "First" was deliberately not treated as a gate.
CONSEQUENCE	Lead alignment leads the rollout, and Guides apply approved guidance on live calls right away.

Working log: D45

B5 Calibrate through cases, not a Lead knowledge test

DESIGNER DECISION

Raised by: Me (the question); GPT (assessment idea); Claude (evidence review) · **Decided by:** Me (working answer)

DECISION	Treat Lead readiness as a gap in what reached Leads, and calibrate through realistic cases rather than testing WN7 knowledge.
RATIONALE	The packet showed strong knowledge in some Leads and uncertainty in others, with no baseline. Leads asked for cues and clips, not WN7 training.
ALTERNATIVE / TRADEOFF	A three-dimension Lead readiness model with a WN7 knowledge assessment (GPT), not adopted because it would solve an unestablished problem. The gap between what Leads asked for and what they may need stays an open uncertainty.
CONSEQUENCE	The meeting opens with a 3-minute verified-current-state refresh, and understanding shows up in the case discussion.

Working log: D66

B6 Meeting length: 25, then 20, then 25 minutes

PROPOSED · NEEDS APPROVAL

Raised by: GPT (25 minutes; agenda splits) · **Decided by:** Me (20, then back to 25; the final split)

DECISION	A 25-minute working meeting, agenda 3 · 9 · 10 · 3, with the middle 19 minutes run as one exercise.
RATIONALE	Twenty minutes left too little room for the cases and alignment. The extra time goes to discussion, not presentation.
ALTERNATIVE / TRADEOFF	Twenty minutes, which better fit the evidence on Lead time ("one Lead could spare ten minutes"; Priya's "smallest manager behavior"). The trade-off is Lead time against one session replacing fragmented coaching later.
CONSEQUENCE	The locked Lead Meeting Plan. Scheduling is subject to Workforce and Care leadership.

Working log: D69, D79

B7 Two cases, and no second Plus case

DESIGNER DECISION

Raised by: Me (two cases); GPT (move the ineligible case); Claude (candidates, composite label) · **Decided by:** Me (locked)

DECISION	Case A: a documented strong recovery where the Plus credit hadn't applied. Case B: a labeled composite in which the serial was checked but troubleshooting continued, ending with what the Lead would check first.
RATIONALE	One case shows the standard; the other practices diagnosing before coaching, which the 70-of-159 pattern called for.
ALTERNATIVE / TRADEOFF	A second Plus case, rejected because Plus was already covered and it would have cost the diagnostic practice. The ineligible case moved to Guide practice.
CONSEQUENCE	Case B is presented as a call record built from real data fields and labeled a composite, not as a real call.

Working log: D73, D80

B8 Example bank becomes Coaching Cues

DESIGNER DECISION

Raised by: Me (excerpts idea); GPT (bank structure); Claude (no transcripts exist) · **Decided by:** Me (cheat sheet, renamed Coaching Cues)

DECISION	Put coaching examples on a one-page Coaching Cues sheet rather than a separate excerpt bank.
RATIONALE	Leads asked for "a clip and a cue." The packet has descriptions of calls, not transcripts.
ALTERNATIVE / TRADEOFF	A 3–5 excerpt bank of real calls. Only verified recordings would be labeled real excerpts; otherwise lines are illustrative.
CONSEQUENCE	Coaching Cues uses sample Lead lines written as illustrations, not scripts.

Working log: D74, D76

B9 INVESTIGATE before coach or escalate

DESIGNER DECISION

Raised by: Claude (in drafting) · **Decided by:** Me (kept)

DECISION	Add INVESTIGATE as a Lead response type when a Guide keeps troubleshooting after eligibility was verified.
RATIONALE	Coaching before the cause is found is the mistake the Lead materials are meant to prevent.
ALTERNATIVE / TRADEOFF	Only coach, escalate or flag.
CONSEQUENCE	The Quick Reference response key, and the diagnose-first move in Coaching Cues.

Working log: D105, D106

B10 Don't infer Orbit confusion from call timing

DESIGNER DECISION

Raised by: Claude (original signal, in drafting) · **Decided by:** Me (corrected)

DECISION	Replace the signal "a long pause, hold or transfer" with the Guide expressing uncertainty about which Orbit result counts.
RATIONALE	Call timing has many causes and shouldn't be read as Orbit confusion.
ALTERNATIVE / TRADEOFF	Keep the inferred behavioral signal.
CONSEQUENCE	Coaching Cues wording.

Working log: D108

C Guide Call Path and recovery requirements

C11 One authority, one job per resource

DESIGNER DECISION

Raised by: GPT (design rules) · **Decided by:** Me (adopted)

DECISION	Beacon owns procedures and policy; every other resource points there and has a single job.
RATIONALE	Uncoordinated chat notes, workarounds and drafts had already caused confusion (Sep 8). A second source of procedure would repeat that.
ALTERNATIVE / TRADEOFF	A fuller Guide reference that restates BH-4419.
CONSEQUENCE	The Call Path is deliberately short and non-procedural, and links to the Orbit panel directly rather than through Beacon.

Working log: D76

C12 Three branches, including No clear result

DESIGNER DECISION

Raised by: GPT (pending/unclear state); Claude (show all branches) · **Decided by:** Me

DECISION	Show Eligible, Not eligible and No clear result, not just the recovery path.
RATIONALE	A recovery-only path teaches "WN7 = replacement", and about half of WN7-product calls in the data weren't eligible. Missing serials or an unavailable tool need a route, not a forced choice.
ALTERNATIVE / TRADEOFF	A single recovery path, with ineligible handling left to Beacon.
CONSEQUENCE	Branching in the Call Path, the practice and the huddle slide.

Working log: D76, D84

C13 Don't fill policy gaps

REQUIRED BY CASE MATERIALS

Raised by: Claude (source audit) · **Decided by:** Me

DECISION	Treat anything not showing Applied as not complete; leave the eligibility-review follow-up expectation and the Lead-unavailable fallback to their owners.
RATIONALE	PO-117 covers a failed transaction, not a pending one, and doesn't define the follow-up expectation. A first draft wrongly implied it did.
ALTERNATIVE / TRADEOFF	Write the missing guidance ourselves.
CONSEQUENCE	Before-release dependencies are shown inline, and the Ownership Map lists their owners. Owner confirmation is pending.

Working log: D110; CALL_PATH_AUDIT

C14 "Check that the customer understands"

DESIGNER DECISION

Raised by: Me (wording); Claude (audit gap 3) · **Decided by:** Me

DECISION	Use "Check that the customer understands the next step."
RATIONALE	More natural on a live call.
ALTERNATIVE / TRADEOFF	PO-117's more specific "invite the customer to repeat back." The difference is recorded in the audit rather than hidden; the two don't contradict.
CONSEQUENCE	Call Path wording, with a known, documented gap.

Working log: D110, D111

D Practice and scenario design

D15 Individual practice replaces the micro-huddle

PROPOSED · NEEDS APPROVAL

Raised by: Me + GPT; Claude (critique) · **Decided by:** Me (scope correction)

DECISION	Replace the proposed 3–5 minute Guide micro-huddle with an individual digital scenario, keeping the team huddle and slide.
RATIONALE	It frees practice from another live session, works in scheduled time and tests application.
ALTERNATIVE / TRADEOFF	Claude first read the change as replacing the whole huddle and suggested dropping the slide; I kept both.
CONSEQUENCE	Huddle and slide, then individual practice, then live Call Path use, then coaching. Sana delivery and practice time still need confirmation.

Working log: D84, D87

D16 Not eligible as the primary scenario

DESIGNER DECISION

Raised by: Claude (forces a decision); Rina, Sep 18 (evidence) · **Decided by:** Me

DECISION	Build the practice around a WN7-pattern call whose serial returns Not eligible.
RATIONALE	Recognizing the pattern isn't eligibility; "the easy example always has a happy ending." It also needs no unapproved Plus wording.
ALTERNATIVE / TRADEOFF	An eligible recovery, or a pending-Plus case, which is blocked on policy.
CONSEQUENCE	Make the Call.

Working log: D84, D111

D17 Fictionalize openly

DESIGNER DECISION

Raised by: Claude (in drafting) · **Decided by:** Me (required explicit framing)

DECISION	Add the WN7 symptoms to an ineligible case informed by a documented call, and say so.
RATIONALE	The documented call had a different symptom, and the sharper version better teaches "check, don't qualify."
ALTERNATIVE / TRADEOFF	Present it as a reconstruction of the real call.
CONSEQUENCE	The intro and call card state that it's fictionalized; the simulated Orbit result is labeled.

Working log: D112, D113

D18 No scoring; completion isn't competence

DESIGNER DECISION

Raised by: GPT · **Decided by:** Me (adopted)

DECISION	Free-text decisions compared with model responses, with no grade. Opened or finished may be tracked as an operational measure only.
RATIONALE	A score would imply proficiency the exercise can't establish.
ALTERNATIVE / TRADEOFF	Scored quiz items.
CONSEQUENCE	Delivery is reported as reach everywhere in the plan.

Working log: D87

E Huddle design and delivery

E19 A lean, Lead-facilitated slide that keeps the Plus requirement

DESIGNER DECISION

Raised by: GPT (keep it lean; later, "if applicable"); Claude (source check) · **Decided by:** Me

DECISION	One 16:9 slide Leads present: five steps, three branches, a recognition cue, and "For an eligible serial, both" at Complete.
RATIONALE	Finance, PO-117 and the locked Call Path all require both the replacement and the credit for an eligible serial.
ALTERNATIVE / TRADEOFF	"Plus credit (if applicable)", rejected. A busier slide that becomes a second Call Path, avoided.
CONSEQUENCE	The locked huddle slide (HTML + PDF).

Working log: D84, D129, D130

F Time, coverage and capacity

F20 Route Specialist help through Leads

PROPOSED · NEEDS APPROVAL

Raised by: Me (intent: a live safety net); Claude (routing); GPT (refinements) · **Decided by:** Me (two approvals under Mateo)

DECISION	During initial rollout only, rotating Specialists may clarify questions in the Lead thread, as capacity allows.
RATIONALE	Specialist Care is the tightest capacity in the case, and a Guide–Specialist side chat would repeat the Sep 8 information sprawl.
ALTERNATIVE / TRADEOFF	Specialist shadowing, then a Guide-facing Specialist chat buddy: explored first, then replaced by routing through Leads.
CONSEQUENCE	Mateo gives two separate approvals (A: the Lead meeting, B: the thread). If capacity allows only one, the Lead meeting comes first.

Working log: D85, D94

G Rollout, ownership and evaluation

G21 Define success before the plan; no numeric targets

DESIGNER DECISION

Raised by: Me; GPT (rename) · **Decided by:** Me

DECISION	Write the success definition (Guide execution, customer recovery, operational capacity) before any rollout sequence, and test each phase against it.
RATIONALE	Each element should trace back to a success outcome. Numbers would be invented.
ALTERNATIVE / TRADEOFF	An "Observable Execution Rubric", renamed to indicators because "rubric" implies scoring.
CONSEQUENCE	Six observable indicators, and no thresholds anywhere in the proposal.

Working log: D88, D89

G22 A baseline that can't deadlock the pilot

DESIGNER DECISION

Raised by: Me + GPT · **Decided by:** Me

DECISION	Quality sets a defensible comparison method; where call evidence is missing, it states the baseline's limits instead of claiming indicator-level gains.
RATIONALE	Requiring a fully reconstructed baseline could block the pilot indefinitely.
ALTERNATIVE / TRADEOFF	Making the full six-indicator baseline a launch prerequisite.
CONSEQUENCE	Rollout plan pages 2–4.

Working log: D93, D99

G23 Confirmed, proposed, to confirm, in three readiness tiers

DESIGNER DECISION

Raised by: GPT (brief and review); Claude (flags) · **Decided by:** Me

DECISION	Label every ownership line by evidence status, and separate launch blockers from evaluation-stage and only-if-used items.
RATIONALE	The organization shouldn't look more settled than the evidence supports.
ALTERNATIVE / TRADEOFF	A RACI matrix, avoided. A thread Admin as a hard launch condition was made conditional on the thread opening.
CONSEQUENCE	The Ownership Map and the Rollout Plan Overview.

Working log: D122–D124, D126

H Packaging and communication

H24 Three front-door overviews before the detail

DESIGNER DECISION

Raised by: GPT (structure) · **Decided by:** Me (agreed; removed Related Plans)

DECISION	The ZIP has three folders: 01 Start Here (three overviews), 02 Detailed Planning, 03 Learning Resources.
RATIONALE	Dana should be able to orient herself in minutes before the five-page plan.
ALTERNATIVE / TRADEOFF	Related Plans as a section inside the Resource Overview.
CONSEQUENCE	The packaging contract and the email's navigation.

Working log: D115–D117, D131

H25 The email argues before it navigates

DESIGNER DECISION

Raised by: GPT (brief); Claude (attribution check) · **Decided by:** Me (final edits)

DECISION	Open with my needs assessment and evidence, then the rationale, then the folders.
RATIONALE	The email needs to persuade Dana to open the materials, not list them.
ALTERNATIVE / TRADEOFF	A deliverables handoff. An observation the brief attributed to a Guide was actually Priya's summary; the email quotes each person accurately and anonymizes the Guide's example.
CONSEQUENCE	The locked pre-read email.

Working log: D131–D136

The five decisions with the most influence on the strategy, plus harness use and open uncertainties, are in **Behind the Design: WN7 Recovery Strategy**.
