WN7 Call Path

Brief whole-home Wi-Fi drops on a WN7 hub or WNM-7 bundle · BH-4419 is the authority

1 Recognize → 2 Verify → 3 Decide → 4 Complete → 5 Explain & Document

1 Recognize

- Whole home drops for a short time, comes back on its own, keeps happening.
- WN7 hub or WNM-7 bundle.

> **Listen for the impact first.** Acknowledge the disruption before moving to the serial.

The pattern means **check**, not **qualifies**. Other causes still exist.

2 Verify

- Ask for the hub serial, from the Northstar app or the hub.
- Enter it in Orbit's `WN7 eligibility` panel.
- Read the result: `Eligible` or `Not eligible`. The model code alone doesn't decide it.

> **Running the check isn't reading it.** No serial, tool down, or unsure of the result? Use **No clear result**.

3 Decide & 4 Complete by what Orbit returned

✓ Eligible recovery path

- Follow the WN7 recovery path in BH-4419. Don't ask for restart steps to qualify.

COMPLETE BOTH

Replacement
Submit the hub order in Orbit; check for a confirmation number; use the shipping estimate shown on the order.

Plus
Attach as BH-4419 describes; check the credit shows `Applied`. A goodwill benefit, not a fix.

No confirmation number, or credit not `Applied` ? Not complete. Keep the recovery case open, document what did and didn't go through, arrange follow-up through the unresolved recovery queue,* and tell the customer what's open, with no unconfirmed timing. **You can end the call with owned follow-up; the open item stays open.**

– Not eligible standard support

- Continue the right troubleshooting or escalation for the reported issue.
- Don't promise a replacement or the Plus benefit. Product name and symptoms don't qualify anyone.
- Finish the standard support steps.

? No clear result don't guess

- Make no promise that depends on eligibility.
- Recheck the serial and result against BH-4419.
- Still unsure? Ask your Lead, or use the established fallback.
- No serial or tool unavailable: open an eligibility review case as BH-4419 describes and tell the customer what happens next.*
- Can't open the panel or order: tell your Lead so it's escalated through existing channels.

5 Explain & Document: before you close

- [ ] **What's done?** e.g., the replacement confirmation and the shipping estimate on the order
- [ ] **What's still open?** Name it plainly, including Plus status
- [ ] **What happens next?** Only what's confirmed
- [ ] **Who owns the follow-up?** Say it and note it
- [ ] **Could the next Guide pick it up from your notes alone?**
- [ ] **Check that the customer understands the next step**

*Before release: Product Ops confirms the follow-up expectation for an eligibility review case; Account Systems and Product Ops confirm follow-up for a credit that hasn't failed but isn't *Applied* yet. Proposed learning resource, not a new procedure. BH-4419 and the Product Operations reference it links to are authoritative; if this page and Beacon differ, follow Beacon. Before release, Care Systems validates the Orbit workflow and General Care access. Account Systems and Product Ops are proposed Plus validation partners, with Specialist Care input; final policy authority is unconfirmed. Your Lead is your first live support; Specialist availability isn't guaranteed. Fictional work sample.
