NORTHSTAR: WN7 SUPPORT · TEAM HUDDLE

One sequence for every WN7 call

Brief whole-home Wi-Fi drops on a WN7 hub or WNM-7 bundle. BH-4419 is the authority.

Northstar Home

1 Recognize

Whole home, brief drop, comes back on its own.

Listen for the impact first. The pattern means check, not qualifies.

2 Verify

Hub serial into Orbit's **WN7 eligibility** panel.

Read the result. Running the check isn't reading it.

3 Decide

Choose the path by **what Orbit returned**, not by the product name or symptoms.

4 Complete

For an eligible serial, both:

Replacement: **confirmation number**

Plus credit: shows `Applied`

Either still open? Recovery isn't complete. Keep the case open.

5 Explain & Document

What's done, what's still open, what happens next, and who owns it.

DECIDE BY THE ORBIT RESULT

Eligible

Follow the **recovery path** in BH-4419. Complete both parts.

Not eligible

Standard support for the issue. No replacement or Plus promise.

No clear result

Don't guess. Recheck, then ask your Lead. No serial or tool down: eligibility review case.

ON CALLS Use the **Guide Call Path** on every WN7 call.

STUCK Your **Lead** first, then the **established fallback.**

NEXT Complete your individual practice: **Make the Call.**

Proposed learning resource, not a new procedure. If this slide and Beacon differ, follow Beacon.
