INTERVIEWER NOTE · NOT PART OF DANA'S PACKAGE

Design Decision Log

Companion to Behind the Design: WN7 Recovery Strategy

A curated record of the design judgment underneath the five decisions in *Behind the Design*: what I chose, why, and how it shaped the proposal.

PROPOSED · NEEDS APPROVAL depends on an organizational owner

REQUIRED BY CASE MATERIALS a constraint from policy or the case record

Entries without a label are my design decisions.

A Needs assessment and problem framing

A1 Separate the need from the requested solution

DECISION Diagnose the performance problem before choosing a format, treating Dana's video request as one possible solution.

RATIONALE Guides were asking for help in the call itself ("what I click and what I say"), several causes weren't about training, and a completion count wouldn't show whether calls changed. A video could still be adapted or narrowed to a specific instructional need once that need was clear, so I didn't rule it out.

RESULT The needs assessment came before any format, and the video narrowed to an optional, conditional Orbit tool walkthrough.

A2 Analyze the workbooks before setting priorities

DECISION Run a data pass on the two Orbit workbooks before locking design targets.

RATIONALE After working through the threads, anecdotes and other qualitative material, the workbooks were the most significant evidence source still unexamined. Upon review, they showed that 70 of 159 eligible calls with a recorded serial check still ended in generic troubleshooting. I was careful not to over-read that: it points to a gap between checking and acting, not to 44% of Guides needing a video, and a recorded check isn't proof the Guide understood the result.

RESULT The 70-of-159 figure anchors Case B in the Lead meeting and the evidence in Dana's email.

A3 Fix design targets before choosing formats

DECISION Lock five design targets (end-to-end Guide performance, Lead calibration, in-call support, operational readiness, and a small capacity-conscious pilot) before deciding any resource format.

RATIONALE Choosing formats first would have rebuilt the video request in other shapes. Each resource needed a defined job before it got a form.

RESULT Every resource maps to one of the five targets.

B Lead alignment and coaching

B4 Anchor in Leads without delaying Guide support

DECISION Anchor the design in Leads while Guide support develops in parallel.

RATIONALE Guides can't carry out a process their Leads haven't been aligned on, and Leads can't coach consistently without knowing what to look for. The release had already relied on Leads without equipping them. I didn't treat "Leads first" as a gate, though: holding Guide support until every Lead was aligned would have delayed help Guides needed.

RESULT Lead alignment opens the rollout, and Guides apply approved guidance on live calls right away.

B5 Calibrate through cases, not a knowledge test

DECISION Treat Lead readiness as a gap in what had reached Leads, and calibrate through realistic cases rather than testing WN7 knowledge.

RATIONALE Some Leads showed strong WN7 knowledge and others were unsure, with no baseline either way, and Leads asked for cues and clips rather than training. A knowledge assessment would have addressed a deficit no one had established. What Leads asked for may still not be all they need, so that stays an open question.

RESULT The meeting opens with a three-minute refresh on the verified current state, and gaps surface in the case discussion.

B6 Meeting length: 25, then 20, then 25 minutes

PROPOSED · NEEDS APPROVAL

DECISION A 25-minute working meeting with a 3 · 9 · 10 · 3 agenda, the middle 19 minutes run as one continuous exercise.

RATIONALE The first proposal was 25 minutes. I cut it to 20 because Leads have little spare time: one Lead could spare ten minutes, and Priya asked for "the smallest manager behavior that makes the learning stick." At 20 minutes the cases and alignment were too compressed. I ultimately judged the extra five minutes for Lead collaboration, discussion and alignment worth the investment, since one well-used session replaces fragmented coaching later.

RESULT The Lead Meeting Plan. Scheduling is subject to Workforce and Care leadership.

B7 Two complementary cases

DECISION Case A: a documented strong recovery where the Plus credit hadn't applied. Case B: a labeled composite where the serial was checked but troubleshooting continued, ending with what the Lead would check first.

RATIONALE One case shows the standard; the other practices diagnosing before coaching, which the 70-of-159 pattern called for. A second Plus case would have repeated ground the meeting already covers and cost the diagnostic practice, and the ineligible case fit Guide practice better.

RESULT Case B is presented as a call record built from real data fields and labeled as a composite, not a real call.

B8 Coaching examples on one page

DECISION Put coaching examples on a one-page Coaching Cues sheet rather than a separate excerpt bank.

RATIONALE Leads asked for "a clip and a cue." The case record describes calls but has no transcripts, so real excerpts are used only if Quality can supply verified recordings; otherwise the lines are illustrative.

RESULT Coaching Cues uses sample Lead lines written as illustrations, not scripts.

B9 INVESTIGATE before coach or escalate

DECISION Add INVESTIGATE as a Lead response when a Guide keeps troubleshooting after eligibility was verified.

RATIONALE Coaching before the cause is found is the mistake the Lead materials are meant to prevent.

RESULT The Quick Reference response key, and the diagnose-first move in Coaching Cues.

B10 Don't infer Orbit confusion from call timing

DECISION Describe the coaching signal as a Guide expressing uncertainty about which Orbit result counts, not as a long pause, hold or transfer.

RATIONALE Threads and operational notes pointed to several possible reasons for a hold, pause or transfer: asking a Lead about the offer, access or permissions, a delayed credit system. Timing alone isn't evidence that a Guide misunderstood Orbit, and coaching on that assumption could miss the real cause.

RESULT The Coaching Cues signal is based on what the Guide says, not how long the call took.

C Guide Call Path and recovery requirements

C11 One authority, one job per resource

DECISION Beacon owns procedures and policy; every other resource points there and has a single job.

RATIONALE Beacon was already familiar to Guides. Uncoordinated notes, workarounds and drafts had already caused confusion (Sep 8), and another procedural authority would add complexity and risk conflicting guidance.

RESULT The Call Path is deliberately short and non-procedural, and links straight to the Orbit panel rather than routing through Beacon.

C12 Keep all three branches

DECISION Show Eligible, Not eligible and No clear result, not only the recovery path.

RATIONALE A recovery-only path teaches "WN7 = replacement," and about half of WN7-product calls in the data weren't eligible. A missing serial or an unavailable tool needs a route, not a forced choice.

RESULT The same three branches run through the Call Path, the practice and the huddle slide.

C13 Don't fill policy gaps

REQUIRED BY CASE MATERIALS

DECISION Treat a Plus credit that doesn't show Applied as not complete, and leave the eligibility-review follow-up expectation and the Lead-unavailable fallback to their owners.

RATIONALE PO-117 covers a failed transaction, not a pending one, and doesn't define the follow-up expectation. An early draft implied it did. Writing plausible answers ourselves would have put unapproved policy in front of Guides.

RESULT Before-release dependencies are shown inline, and the Ownership Map names who must confirm each one.

C14 "Check that the customer understands"

DECISION Use "Check that the customer understands the next step."

RATIONALE It's more natural on a live call. PO-117's "invite the customer to repeat back" is more specific; the difference is documented in the source audit rather than hidden, and the two don't conflict.

RESULT The Call Path's closing check.

D Practice and scenario design

D15 Individual practice replaces the micro-huddle

PROPOSED · NEEDS APPROVAL

DECISION Replace the proposed 3–5 minute Guide micro-huddle with an individual digital scenario, keeping the team huddle and slide.

RATIONALE Individual practice fits scheduled work time, avoids another live session and tests application. I kept the team huddle as the place Leads introduce the change and open the conversation.

RESULT Huddle and slide, then individual practice, then live Call Path use, then coaching. Sana delivery and practice time still need confirmation.

D16 Not eligible as the primary scenario

DECISION Build the practice around a WN7-pattern call whose serial returns Not eligible.

RATIONALE Recognizing the pattern isn't eligibility, and "the easy example always has a happy ending." The scenario asks Guides to apply judgment and change behavior rather than memorize the recovery steps, and it needs no unapproved Plus wording. It's openly fictionalized: informed by a documented ineligible call, with the WN7 symptoms added, and it says it isn't a reconstruction of that call.

RESULT Make the Call.

D17 No scoring; completion isn't competence

DECISION Free-text decisions compared with model responses, with no grade. Opened or finished may be tracked as an operational measure only.

RATIONALE A score would imply proficiency the exercise can't establish.

RESULT Delivery is reported as reach throughout the plan.

E Huddle design and delivery

E18 A lean, Lead-facilitated slide that keeps the Plus requirement

DECISION One 16:9 slide Leads present: the five steps, three branches, a recognition cue, and "For an eligible serial, both" at Complete.

RATIONALE Finance, PO-117 and the Call Path all require both the replacement and the credit for an eligible serial, so softer wording ("if applicable") was rejected. Keeping the slide lean stops it from becoming a second Call Path.

RESULT One shared picture of the sequence that Leads use to introduce the change in their huddle and point Guides to their practice.

F Time, coverage and capacity

F19 Route Specialist help through Leads

PROPOSED · NEEDS APPROVAL

DECISION During initial rollout only, rotating Specialists may clarify questions in the Lead thread, as capacity allows.

RATIONALE Specialist Care is the tightest capacity in the case, and a Guide-facing Specialist channel would repeat the Sep 8 information sprawl. Shadowing and a Guide chat buddy were explored first; routing through Leads keeps one support path.

RESULT Mateo gives two separate approvals (A: the Lead meeting, B: the thread). If capacity allows only one, the Lead meeting comes first.

G Rollout, ownership and evaluation

G20 Define success first, without letting the baseline block the pilot

DECISION Define observable success (Guide execution, customer recovery, operational capacity) before sequencing the rollout, and have Quality set a defensible comparison method.

RATIONALE Each phase should trace back to a success outcome, and numeric targets would have been invented. The available baseline is a call sample with eligibility classified after the fact, and some underlying call evidence may not exist. Requiring a full six-indicator baseline could block the pilot indefinitely, so where evidence is missing, Quality states the limits instead of claiming indicator-level gains.

RESULT Six observable indicators, no thresholds, and an evaluation approach that's explicit about what it can't prove.

G21 Confirmed, proposed, to confirm, in three readiness tiers

DECISION Label every ownership line as confirmed, proposed or to confirm, and separate launch blockers from evaluation-stage and only-if-used items.

RATIONALE The organization shouldn't look more settled than the evidence supports. Naming unresolved ownership also opens room for stakeholder collaboration, process refinement and agreement before launch; it isn't just an inventory of missing approvals.

RESULT The Ownership Map and the Rollout Plan Overview.

H Packaging and communication

H22 Three high-level overviews before the detail

DECISION Organize the package in two top-level sections: 01 — Proposal (Start Here with three high-level overviews, Needs Assessment & Planning, Learning Resources) and 02 — UOP (the interviewer material). This structure was refined during final assembly from an earlier three-folder plan.

RATIONALE Dana should be able to orient herself in minutes before the five-page plan.

RESULT The package structure and the email's navigation.

H23 Persuade, then navigate

DECISION Open the email with my needs assessment and the evidence, then the rationale, then the folders.

RATIONALE The email has to persuade Dana to open the materials, not just list them, so the performance problem and the reasoning come before the folder structure.

RESULT Dana's pre-read email leads with the performance gap and supporting evidence, explains why the proposed approach goes beyond the original video request, and then guides her through the proposal package. The structure establishes the case for the intervention before introducing the resources.
