CUSTOMER CARE LEARNING · LEAD ALIGNMENT · FACILITATOR GUIDE

WN7 Lead Alignment: 25-Minute Working Meeting

A working discussion, not a lecture. Two cases, one documented and one composite, do the teaching; Leads leave aligned on what good execution looks like and how to coach or escalate when it breaks down.

For Learning facilitators | Proposed meeting design · owner confirmations pending

Who and when

- **Participants:** the Leads whose Guides are entering the next rollout wave. Every Lead attends before their own Guides start; not all 18 need to attend before the pilot.
- **Roles:** Learning facilitates. Care leadership ensures participating Leads can attend. Specialist Care supports only with Mateo's approval for meeting support, so don't assume Specialists will be there.
- **Authority:** approved guidance in Beacon, including BH-4419, stays authoritative. The meeting aligns practice; it doesn't create policy.

Leads leave able to

1. Recognize what correct WN7 recovery execution looks like on a call.
2. Tell a knowledge gap apart from an Orbit-reading, access, or process problem.
3. Decide what to coach and what to escalate.
4. Introduce and reinforce the intervention with their Guides.

Run of show

0–3	3–12	12–22	22–25
Situation & purpose	Two cases · A ≈ 4 min · B ≈ 5 min	Coaching alignment	Next actions

The middle 19 minutes run as one exercise: *What happened and why? → What should Guides do, and how should Leads respond?*

Before the meeting

- [ ] Print or share the two case cards (page 2). The written cases are enough to run the discussion.
- [ ] Have BH-4419 and the sequence slide on hand; bring the Guide Call Path if it's ready.
- [ ] Confirm whether Specialist support is approved. If yes, form small groups with a Specialist in each; if not, run as one group.
- [ ] Optional: a de-identified Case A recording, only if available and approved by Quality.

Validation safeguards

- **Plus status:** say only that the credit had not been applied at the documented point. Don't call it pending, failed, rejected, or completed. Account Systems and Product Ops are the proposed partners for validating transaction status and approved wording, with Specialist Care's operational input.
- **Follow-up ownership:** no owner is named. Leads identify what needs an owner; final operational ownership is pending validation.
- **Orbit:** discuss only the documented eligibility-check facts. Don't describe screens, fields, or result locations. Care Systems confirms the live workflow before operational use.

0–3 Situation and purpose

FACILITATOR

Open with the gap: of 159 eligible General Care calls with a serial check recorded, **70 (44%) still ended in generic troubleshooting**. The gap is acting on the result, not just finding the article. (Orbit systematic sample, Sep 21–30; eligibility classified retrospectively.)

ASK LEADS

"How do we help Guides make the right decision and complete the right recovery during a live call?"
Then go straight to Case A.

3–12 · What happened, and why? Let Leads talk first; hold the green notes until they have.

Case A · ≈ 4 min Strong recovery with a Plus complication

Documented call · Quality listening notes, Sep 24

WHAT HAPPENED (READ ALOUD)

- The Guide verified an eligible serial and completed the replacement order.
- She then noticed the Plus credit had not been applied at that point in the call.
- She told the customer she would stay with the handoff, opened the approved follow-up, and explained the case stayed open until the credit was resolved. The caller said that was clear.
- The call ran longer than Specialist examples because the credit system was delayed.

ASK LEADS

1. The replacement went through. Why isn't the call finished?
2. What did she do about the unresolved part, and what did she *not* promise?
3. What needs documenting so the next contact can see it?
4. What needs an owner, and how would you confirm who that is?
5. What would ending the call sooner have cost?

LISTEN FOR

Recovery is complete when both transactions are done, or follow-up is opened and explained, not when the replacement is submitted. No unconfirmed outcome or timing promised. Done and pending both recorded. A longer call can beat a callback: *"The customer called back about the free year, and the second Guide had to figure out what we had promised."* (Dev, Sep 18)

Case B · ≈ 5 min Serial checked, but generic troubleshooting continued

Composite call record, not a single historical call

CALL RECORD (BUILT FROM THE 70-OF-159 PATTERN)

Product	WN7 · intermittent whole-home disconnect
Serial verified	**Yes** · Eligible for recovery: **Yes**
Path	Generic troubleshooting · disposition "troubleshooting complete"
Replacement / Plus	Not arranged / not attached
Handle time	About 20 minutes

A recorded serial check doesn't show the Guide saw or understood the result. Keep that open.

ASK LEADS · REQUIRED

What would you ask or check first, before deciding how to coach?

OPTIONAL PROBES, IF TIME ALLOWS

- What does this record tell you, and what doesn't it?
- Why might the Guide have kept troubleshooting?
- How would your coaching change depending on what you find?

POSSIBLE CAUSES (HOLD UNTIL LEADS OFFER THEIRS)

- Didn't know the next step (Guide R., Sep 8)
- Couldn't tell "which value on the screen counted as the result" (Sep 22)
- Access or process: correct "Orbit permissions," or didn't know the screen? (Sep 24)
- Felt expected to troubleshoot: *"I get asked why I did not use the basic steps"* (Guide M., Sep 5)
- Something else, e.g., the customer insisted

WHAT A LEAD CHECKS FIRST

- The call, if recorded: did the Guide mention the result?
- *"Walk me through what you saw after you entered the serial."*
- *"What did you expect the next step to be?"*
- *"Could you open the replacement order and credit action?"* If not, check access with Care Systems.
- *"What made you keep troubleshooting?"*

12–22 MIN · COACHING ALIGNMENT

What should Guides do, and how should Leads respond?

Turn the cases into a shared standard. Walk the sequence left to right, then agree on responses.

Recognize	Verify	Decide	Complete	Explain & Document
Pattern spotted; moves toward verification	Eligibility checked; result read correctly	Path matches the verified result	Both transactions done, or follow-up documented	Done, pending, next step; recorded for the next contact
Recognition	Verification	Decision	Recovery	Communication · Documentation

Labels under each step are the six observable indicators Leads look for in reviewed calls (from the rollout plan).

Eligible
Recovery path: both applicable transactions, or follow-up opened and explained.

Not eligible
Standard support; no replacement promised. A product name isn't a promise.

Unclear or can't read the result
Don't guess. Verify again or bring in the Lead.

IF THE BREAKDOWN IS…	LEAD RESPONSE	TYPE
Didn't know the next step	Walk through the Call Path; short practice on the decision	COACH
Couldn't read the Orbit result	Point to the approved, validated guidance; flag gaps in the thread	COACH FLAG
Access, permission, or process blocker	Don't coach it. Use the established escalation route to Care Systems; share recurring blockers in the Lead thread	ESCALATE
Felt expected to keep troubleshooting	Clarify: once eligibility is verified, stop the restart loop. Flag to Quality so review expectations match	COACH FLAG
Plus action unresolved at call end	Confirm follow-up was opened, explained, and documented, with no unconfirmed timing promised; confirm ownership through the approved route	FOLLOW-UP
Other or unclear	Log it in the thread so Quality can look for patterns	FLAG

ASK LEADS

1. Which of these breakdowns do you expect most on your team?
2. What will you listen for first in your next call review?
3. What would you escalate rather than coach?

FACILITATOR

Share the recognition cue as an internal prompt for Guides, not customer wording: *"Whole home, brief drop, returns on its own, then model and serial,"* plus *listen for the impact first*. These are suggestions from Ben Cruz and Imani Ford (Sep 10), not approved procedure.

22–25 Next actions: what each Lead does after the meeting

1 · Huddle
Introduce the sequence, slide, Call Path, and digital scenario in your existing team huddle.

2 · Support route
Confirm with Guides how to reach you live and the established fallback route.

3 · Reinforce
Use existing call reviews and coaching to look for the six indicators.

4 · Thread
Route recurring blockers and verified updates through the temporary Lead thread.

CLOSE WITH

Huddle attendance and scenario completion show the intervention reached Guides. They don't show proficiency; call reviews do. Before ending, confirm each Lead knows who the thread Admin is.
