LEAD QUICK REFERENCE · COACHING & SUPPORT

WN7 recovery: what good looks like, and what to do when it breaks down

1 The decision sequence: what to look for on the call

Recognize	Verify	Decide	Complete	Explain & Document
RECOGNITION	VERIFICATION	DECISION	RECOVERY	COMMUNICATION / DOCUMENTATION
Spots the WN7 pattern; moves to verify	Checks eligibility; reads the result correctly	Picks the path that fits the verified result	Both applicable transactions, or owned, documented follow-up	Done, pending, next step / Actions, open work, owner

ⓘ **A recorded serial check isn't proof.** It shows a check happened, not that the Guide saw or understood the result. Listen for what they did next.

Eligible
Approved recovery: replacement and applicable Plus action, or documented follow-up for what's unresolved.

Not eligible
Standard support. No replacement promised on product name alone.

Unclear or unavailable result
Don't guess. Use the established support or escalation route.

2 When execution breaks down: find the cause, then respond

IF YOU SEE…	ASK OR CHECK FIRST	THEN	RESPONSE
Doesn't know the next step	"What did you expect the next step to be?"	Walk through the Call Path; short practice on the decision	COACH
Misreads or can't interpret the Orbit result	"Walk me through what you saw after you entered the serial."	Coach against validated guidance. If the guidance is unclear, flag the gap in the Lead thread	COACH FLAG
Tool, permission, or process blocker	"Could you open the replacement order and credit action?"	Don't coach it. Use the established escalation route to Care Systems; share recurring patterns in the Lead thread	ESCALATE
Keeps troubleshooting after eligibility was verified	"What made you keep troubleshooting?"	Find the cause first (knowledge, interpretation, access, or expectations), then use the matching row. If they felt expected to troubleshoot, clarify and flag to Quality	INVESTIGATE
Plus action unresolved at the end of the call	What was documented, and what was the customer told?	Confirm status is documented, the customer knows what's pending, and follow-up is opened with an owner through the approved route. No outcome or timing promised	FOLLOW-UP
Something else, or unclear	Note what you saw	Log it in the Lead thread so Quality can look for patterns	FLAG

COACH you handle it · ESCALATE owner fixes it · FLAG pattern review · FOLLOW-UP needs an owner · INVESTIGATE cause unknown

3 Your part in the rollout

Huddle
Introduce the sequence, Call Path, and digital scenario in your existing team huddle.

Live support
Confirm Guides know how to reach you during a call, and the established fallback.

Reinforce
Use existing call reviews and coaching to look for the six indicators above.

Lead thread
Share recurring blockers and verified updates. It's for coordination, not live support or escalation.

Huddle attendance and scenario completion show reach, not proficiency. Call reviews show execution.

Proposed learning resource, not approved procedure. Beacon and BH-4419 remain authoritative. Plus validation: Account Systems and Product Ops (proposed); final policy authority unconfirmed. Specialist support depends on capacity. Fictional work sample.
